EXAMINER'S ACTION

Art Unit 3309

The numbering of claims is not accordance with 37 C.F.R. § 1.126. The original numbering of the claims must be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When claims are added, except when presented in accordance with 37 C.F.R. § 1.121(b), they must be renumbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 71-83 have been renumbered 44-56, respectively.

Claims 44-56 of this application has been copied by the applicant from United States Patent Nos. 5,037,421 and 5,147,354. This claim is not patentable to the applicant because Applicant's original disclosure does not require that the tissue be irrigated while ablation occurs nor that the tissue be maintained in a fluid field.

An interference cannot be initiated since a prerequisite for interference under 37 C.F.R. § 1.606 is that the claim be patentable to the applicant subject to a judgement in the interference.

The following is a quotation of the first paragraph of 35 U.S.C. § 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains,

Art Unit 3309

or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The specification is objected to under 35 U.S.C. § 112, first paragraph, as failing to adequately teach how to make and use the invention, i.e., failing to provide an enabling disclosure and because Applicant's disclosure, as originally filed, does not provide support for the device as now claimed.

The disclosure does not discuss the specific claim limitations above.

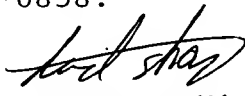

Claims 44-56 are rejected under 35 U.S.C. § 112, first paragraph, for the reasons set forth in the objection to the specification.

Claims 44-56 of this application is asserted by applicant to correspond to claims of U.S. patent nos. 5,037,421 and 5,147,354.

The examiner does not consider this claim to be directed to the same invention as that of U.S. Patent Nos. 5,037,421 and 5,147,354 because Applicant's claims cover a wavelength range unsupported by the patent disclosures. Accordingly, an interference cannot be initiated based upon this claim.
